

# NAB/250-1K E

## ECO-FRIENDLY

# IMPREGNATING RESIN

Power-up your environmental attitude

## YOUR ADVANTAGES

- Exceptional mechanical strengthening
- Slightly elastic after curing, which reduces the risk of cracking and crushing of the cured resin during vibrations
- Low VOC (according to STN EN 6045-3-5)
- The impregnating resin is odorless at room temperature. Smell does not spread from the bathtub after operation
- There is no need to burn the vapors during curing
- The low viscosity ensures good flow into the winding and thus its high filling/good impregnation of insulating materials
- The impregnating resin is fast in curing - efficiency, but at the same time stable in storage
- The impregnating resin is universal and suitable for all processing technologies
